                                                                                                                                                                                                                                                               Yamamoto
```

CC full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide comprises one of the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the coligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end complementary to the complementary strand of a polynucleotide which comprises a 5'-end complementary to the sequence and an oligonucleotide comprising a sequence, where the complementary to a polynucleotide which comprises a 3'-end sequence, where the polynucleotide comprises a 3'-end sequence, where the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers are useful for synthesising polynucleotides, and the combination of comprises and the combination of the full-length cDNAs. The primers are also useful for the combination of the full-length cDNAs. The primers are useful for synthesising polynucleotides, comparisons of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs are present human amino acid sequences; and AAH13628 and AAH13633 to AAH13628 and the comprises and the comparisons of the present luman cDNA sequences; and AAH13628 to AAH13632 represent human amino acid sequences; and shab2446 to CC AAB5893 represent human amino acid sequences; and shab2495 to AAH13632 represent invention.

                                                                                                                                                                                                                                                                                                                                         The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinyinhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disenders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to novel genes (AAL34669-AAL37666) and proteins (C (ARB03087-ABB04109) associated with the musculoskeletal system useful conformation of the conformal conditions e.g. by protein or gene therapy. The genes are isolated from a range of human crissues disclosed in the specification. The nucleic acids, proteins, c and prevention of: (a) cancer, e.g. breast and ovarian cancer and cother cancers of the adrenal gland, bone, bone marrow, breast, c gastrointestinal tract, liver, lung, or urogenital; (b) immune c discorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, c multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) carddiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and c parasitic infections. But was obtained in electronic format directly c from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                         encoding musculoskeletal for detecting disorders,
```

Sequence encoding musculoskeletal system associated polypeptides useful comprising a control of detecting disorders, e.g., cancer or cancer metastases, in animals con rhumans. The nucleic acid: stimulates re-vascularisation of ischaemic tissues associated with conditions such as thrombosis, arteriosclerosis, cand other cardiovascular conditions; treats wounds due to injuries, channes, post-operative tissue repair, and ulcers; stimulates angiogenesis cand limb regeneration, stimulates neuronal growth; can treat and prevent neuronal damage occurring in certain disorders or neurodegenerative conditions, such as threats wounds due to injuries, and limb regenerative tissue repair, and ulcers; stimulates angiogenesis conditions, such as, Alzheimer's disease, parkinson's disease, and conditions, such as, Alzheimer's disease, and aid in tissue conditions, such as, Alzheimer's disease, and aid in tissue conditions, bearts, prevents skin aging due to sunburn by the members activate hair-forming cells and promotes melanocyte growth; conditions before transplantation or for supporting due to sunburn by this such as activate hair-forming cells and promotes melanocyte growth; companies before transplantation or for supporting cell culture of primary tissues; induces tissue of mesodermal origin to differentiate in early cembryos; increases or decreases the differentiation or proliferation of embryonic stem cells, besides, haematopoietic lineage; modulates colour, eye colour, skih, percentage of adipose tissue, pigmentation, size, and shape (e.g., cosmetic supporting cell state by influencing biorhythms, caricadic rhythms, depression, tendency for violence, tolerance for pain, reproductive capabilities, hormonal or endocrine levels, appetite, conditions, minerals, cofactors or accesses storage capabilities, tendency, or stress; i invention describes an isolated nucleic acid molecule comprising protein, car l components.

```
CC are methods for utilising uridine kinase polypeptides and polynucleotides CC in diagnostic assays. The polynucleotides and polypeptides of the CC invention may be used as diagnostic reagents by detecting mutations in an CC associated gene. An array of oligonucleotide probes comprising the CC constructed to conduct efficient screening of genetic mutations, for CC example. Detection of abnormally decreased or increased levels of CC polypeptide or mRNA expression may also be used for diagnosing or CC determining susceptibility of a subject to a disease of the invention. CC The polynucleotide sequences of the invention can be used for chromosome CC localisation studies and tissue expression studies. The polypeptides of CC the invention or fragments thereof may be used as immunogens to produce CC antibodies. These antibodies may be used as immunogens to produce CC clones expressing the polypeptide. The polypeptides and polynucleotides CC of the invention can be used as a vaccine or in gene therapy to treat CC diseases such as human ovarian cancer, human colon carcinomas, and CC immunological disorders. This polynucleotide sequence represents the DNA CC of a human uridine kinase of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
                                                    The invention relates to novel genes (ABL89449-ABL90853) and proteins (C (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are consisted from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful continuously in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast can ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune chamber, autoimmune autoimmune thyroiditis, diabetes mellitus, Crohn's colitis; (c) cardiovascular disorders such as myocardial ischaemias; (c) disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (c) disease, and (f) infectious diseases e.g. cerebral anoxia and cepilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antidiabetic; antialiparastic; vulnerary; anticonvulsant; antibacterial; antifungal, antiparastic; cardiant; gene therapy; cancer; immune disorder; cardiovascular disorder neurological disease; infection; human; secreted protein; gene; ss.

Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -

Claim 1. SEQ ID 1667; 2537pp + CD ROM; English

CC The present invention describes primer sets for synthesising 5602 CC full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the coligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end cc complementary strand of a polynucleotide which comprises a 5'-end cc complementary to a polynucleotide which comprises a 3'-end sequence complementary to a coligonucleotide comprises a 3'-end sequence, where the coligonucleotide comprises a 1 least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in cc the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and cc in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by eotides,

The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.

        The present invention relates to the isolation of novel human molecules for disease detection and treatment (MDDT), and the polynucleotide sequences (mddt) encoding them. The MDDT polypeptides may be used to screen for molecules that bind to, or are bound by the encoded polypeptides, and to develop a transcript image of a tissue or cell type. Probes comprising at least 20 nucleotides of the mddt polynucleotide may be used to assess the toxicity of a test compound. The MDDT polypeptides and mddt polynucleotides are useful in the diagnosis, study, prevention and treatment of diseases associated with the expression of molecules for disease detection and treatment. Such all polynucleotides are useful and the expression of molecules for disease detection and treatment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cirrhosis, or cancers), and autoimmune/inflammatory disorders (e.g. asthma, Crohn's disease, or multiple sclerosis). The mddt polynucleotides may also be used as molecule markers, in microarra and in somatic or germline gene therapy. ABS51779-ABS51814 encode the MDDT proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulce vulnerary; antionvulsant; antibacterial; antifungal; antiparastito; cardiant; gene therapy; cancer; immune disorder; cardiovascular diso

The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment
                                                                                                                      Claim

           conditions, such as, Alzheimer's disease, Parkinson's disease, and AIDS-related complex; stimulates chondrocyte growth, thus they can be used to enhance bone and periodontal regeneration and aid in tissue transports or bone grafts; prevents skin aging due to sumburn by stimulating keratinocyte growth; prevents hair loss, since FGF family members activate hair-forming cells and promotes melanocyte growth; stimulates growth and differentiation of hematopoietic cells and bone marrow cells when used in combination with other cytokines; maintains organs before transplantation or for supporting cell culture of primar tissues; induces tissue of mesodermal origin to differentiate in early embryos; increases or decreases the differentiation or proliferation of embryos; increases or decreases the differentiation or proliferation of embryos; increases or decreases the differentiation or proliferation of embryos; increases or decreases the differentiation or proliferation of embryos; increases or decreases the differentiation or proliferation or embryos; increases or decreases the differentiation or proliferation or embryos; increases or decreases the differentiation or proliferation or embryos; increases or decreases the differentiation or proliferation or embryos; increases or decreases the differentiation or proliferation or embryos; increases or decreases the differentiation or proliferation or embryos; increases or decreases the differentiation or proliferation or pro
                                                                                                                                                                                                                                                                       and limb regeneration; stimulates neuronal growth; can treat and prone neuronal damage occurring in certain disorders or neurodegenerative
                                                                                                                                                                                                                                                                                                               or humans. The nucleic acid: stimulates re-vascularisation of ischaemic tissues associated with conditions such as thrombosis, arteriosclerosis, and other cardiovascular conditions; treats wounds due to injuries, burns, post-operative tissue repair, and ulcers; stimulates angiogenesis
                                                                                                                                                                                                                                                                                                                                                                                                             The invention describes an isolated nucleic acid molecule comprising a sequence encoding musculoskeletal system associated polypeptides useful for detecting disorders, e.g., cancer or cancer metastases, in animals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1; SEQ ID NO 399; 321pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolated nucleic acid molecules encoding musculoskeletal system associated polypeptides, useful for detecting disorders, e.g. cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 27-SEP-2000;

CC mammalian characteristics, such as, body height, weight, hair colour, eye colour, skin, percentage of adipose tissue, pigmentation, size, and shape CC (e.g., cosmetic surgery); modulates mammalian metabolism; changes CC mammals metal state or physical state by influencing biorhythms, CC caricadic rhythms, depression, tendency for violence, tolerance for pain, CC printed specification, but was obtained in electronic levels, appetite, CC flibido, memory, or stress; increases or decreases storage capabilities, CC fat content, lipid, protein, carbohydrate, vitamins, minerals, coffactors CC or other nutritional components. This sequence encodes a novel human CC musculoskeletal system antigen.

CC Note: The sequence data for this patent did not form part of the CC printed specification, but was obtained in electronic format directly from the US patent office at CC from the US patent of the US patent office at CC from the US patent of the CC from the US patent of the CC from the

Where difference assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.  This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given	Submitted (06-0CT-2001) Sanger Centre, Hinton, Cambridgesnire, CB10 1SA, UK.
